# 1. Included Files

## 1.1 HTML/PHP

44 HTML/PHP files (alphabetical order):

about.html	blog6.html	isotope.html	pricing.html
about2.html	blog7.html	portfolio-post.html	pricing2.html
accordion.html	contact.html	portfolio-post2.html	services.html
backgrounds.html	contact.php	portfolio-post3.html	services2.html
blog-post.html	contact2.html	portfolio-post4.html	services3.html
blog-post2.html	contact3.html	portfolio-post5.html	sidenav.html
blog-post3.html	font-icons.html	portfolio-post6.html	slider-carousel.html
blog.html	index.html	portfolio.html	styles.html
blog2.html	index2.html	portfolio2.html	tab.html
blog3.html	index3.html	portfolio3.html	
blog4.html	index4.html	portfolio4.html	
blog5.html	index5.html	portfolio5.html	

## 1.2 CSS

CSS files – with usage details (order of importance):

<b>bootstrap.min.css</b> <i>Stylesheet (minified) for Bootstraps front-end framework</i>	<b>owl.carousel.css</b> <i>Basic stylesheet for content sliders/carousels</i>	<b>green.css, blue.css, red.css, pink.css, purple.css, orange.css, navy.css, gray.css</b> <i>Template color scheme stylesheets</i>
<b>main.css</b> <i>Main template stylesheet</i>	<b>owl.transitions.css</b> <i>CSS3 transitions for content sliders/carousels</i>	<b>animate.min.css</b> <i>Stylesheet (minified) for CSS3 animations</i>

## 1.3 Font Icons

Selection of Fontello font icons (<http://fontello.com>) – with format details (alphabetical order):

<b>fontello.css</b> <i>Stylesheet for using the font icons</i>	<b>fontello...*.svg</b> <i>Font files for legacy iOS</i>	<b>fontello...*.woff</b> <i>Font files for modern browsers</i>
<b>fontello...*.eot</b> <i>Font files for Internet Explorer</i>	<b>fontello...*.ttf</b> <i>Font files for Safari, Android, iOS</i>	

## 1.4 Images

Template images – with usage details (order of importance):

<b>logo.svg, logo-white.svg</b> <i>Template sample logos in SVG format (Scalable Vector Graphics) for usage on light and dark backgrounds</i>	<b>favicon.ico</b> <i>Template sample logo icon for display in browser tabs and address bars</i>	<b>pattern-background...*.jpg</b> <i>Free template pattern background images</i>
	<b>image-background...*.jpg</b> <i>Free template background images</i>	<b>...*.jpg, ...*.png</b> <i>Other template placeholder images</i>

## 1.5 JavaScripts

JavaScripts and integrated jQuery scripts – with usage details (order of importance):

<b>bootstrap.min.js</b> <i>Script (minified) for Bootstrap’s front-end framework</i>	<b>skrollr.min.js, skrollr.stylesheets.min.js</b> <i>Scripts (minified) for changing CSS styles while scrolling down, e.g. the shrunk website header</i>	<b>jquery.validate.min.js</b> <i>Script (minified) for form input validation</i>
<b>bootstrap-hover-dropdown.min.js</b> <i>Script (minified) for enabling Bootstrap dropdown menus on hover</i>	<b>owl.carousel.min.js</b> <i>Script (minified) for content sliders/carousels</i>	<b>viewport-units-buggyfill.js</b> <i>Bugfix script that converts viewport units (vh, vw) into pixels on iOS (mobile) Safari</i>
<b>jquery.min.js</b> <i>Script (minified) for jQuery script usage</i>	<b>jquery.isotope.min.js</b> <i>Script (minified) for re-ordering elements dynamically with advanced content filtering and sorting – also enables Masonry grid layouts</i>	<b>scripts.js</b> <i>Script for adjustments and initialization of all in the HTML files linked JavaScripts</i>
<b>jquery.easing.1.3.min.js</b> <i>Script (minified) for easing jQuery transitions</i>	<b>jquery.easytabs.min.js</b> <i>Script (minified) for powerful tab usage</i>	<b>html5shiv.js</b> <i>Script for enabling HTML5 usage in Internet Explorer</i>
<b>waypoints.min.js, waypoints-sticky.min.js</b> <i>Scripts (minified) for fixing the website header to the top of the screen when scrolling down</i>	<b>google.maps.api.v3.js</b> <i>Script for displaying Google Maps</i>	<b>respond.min.js</b> <i>Script for enabling CSS3 Media Queries for Responsive Webdesign in Internet Explorer</i>
	<b>jquery.form.js</b> <i>Script for forms</i>	

## 2. Technology

REEN is based on Twitters popular front-end framework Bootstrap for fully flexible and responsive layouts. It also uses the latest web technology HTML5 for semantic content structuring and CSS3 for versatile and powerful styling options.

Read more about the used technology:

Bootstrap: <http://getbootstrap.com>  
HTML5/CSS3: <http://www.w3schools.com>  
HTML5: <http://html5doctor.com>

## 3. Usage – Customization

### 3.1 HTML

Now comes the really interesting part! Learn how to use and customize this website template to fit your needs. The most important thing for you to do is actually look into the HTML source code and see how elements are written! The clean and commented code makes it easy for you to copy code blocks from content modules and past them in different places or layouts.

```
475 <!-- ===== SECTION – LATEST WORKS ===== -->
476
477 <section id="latest-works">
...     ...
646 </section>
647
648 <!-- ===== SECTION – LATEST WORKS : END ===== -->
```

### 3.2 Logo

It is highly recommended to use vector graphics for the logo like the REEN template does with the SVG (Scalable Vector Graphics) file format. This ensures the best possible and sharpest view on mobile devices and of course when scaling the logo. If it is not possible for you to use vector graphics you can still use raster graphics like the JPG or PNG file format of course. In this case you have to change the filename extension of the logo in the following HTML parts to this for example:

```

79      <!-- ===== LOGO ===== -->
80
81      <a class="navbar-brand" href="index.html"></a>
82
83      <!-- ===== LOGO : END ===== -->

```

You can even use a reduced or different logo especially for smaller mobile screens:

```

64      <!-- ===== LOGO MOBILE ===== -->
65
66      <a class="navbar-brand" href="index.html"></a>
67
68      <!-- ===== LOGO MOBILE : END ===== -->

```

### 3.3 Colors

REEN comes with 8 prestyled template color schemes: green, blue, red, pink, purple, orange, navy and gray. Just change the next line in the <head> section of the HTML code to the color you prefer:

```

19      <link href="assets/css/green.css" rel="stylesheet" title="Color">

```

Afterwards you can delete these lines of code for demo purposes:

```

776      <!-- For demo purposes – can be removed on production -->
777      <link href="assets/css/green.css" rel="alternate stylesheet" title="Green color">
778      <link href="assets/css/blue.css" rel="alternate stylesheet" title="Blue color">
779      <link href="assets/css/red.css" rel="alternate stylesheet" title="Red color">
780      <link href="assets/css/pink.css" rel="alternate stylesheet" title="Pink color">
781      <link href="assets/css/purple.css" rel="alternate stylesheet" title="Purple color">
782      <link href="assets/css/orange.css" rel="alternate stylesheet" title="Orange color">
783      <link href="assets/css/navy.css" rel="alternate stylesheet" title="Navy color">
784      <link href="assets/css/gray.css" rel="alternate stylesheet" title="Gray color">
785
786      <script src="switchstylesheet/switchstylesheet.js"></script>
787
788      <script>
789          $(document).ready(function(){
790              $(".changeColor").switchstylesheet( { separator:"color" } );
791          });
792      </script>
793      <!-- For demo purposes – can be removed on production : End -->

```

## 3.4 Images

The image usage in this website template is very easy to handle as well. You do not need to have pixel perfect image sizes. Just use the largest possible image size the image appears on the website – the website template does the rest when displaying the images at smaller sizes.

## 3.5 Features

The best and easiest way to understand how to use the included template features is to view the source codes of the following feature HTML files:

**accordion.html**  
**backgrounds.html**

**font-icons.html**  
**isotope.html**

**slider-carousel.html**  
**styles.html**

**tab.html**

## 3.6 Contact Form

To insert your own email address into the contact form, open the **contact.php** file and edit the following line of code:

```
2 // ===== Enter your email address here ===== //
3 $to = "YOUR EMAIL";
```

# 4. Support

Sometimes it is faster and more effective to solve problems through communication. So for problems you cannot solve with help of this documentation please send me a message and i will see how i can help!
